" ... Easy to install and use and a great look/design. ... "

" ... This has to be the easiest to use program I think I've had to deal with at all this year. ... "

Access levels, roles, groups, and security

There are two places where you may edit access levels for users.

In the global Users section under admin, you may assign a user to a role. These are:

Normal - Any user assigned to this role will have different access levels based on the settings of each calendar will fall into this category.

Super User - Any user assigned to this role has **full reign over the entire application**. They may reset the view and add events to any calendar. etc...

Username	Role	
<input type="text"/>	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>
<input type="text"/>	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>

Only users assigned to the role of Super User may create calendars. However, once a calendar is created, ownership of that calendar is assigned to any user.

Each calendar also has a Members list. This is where you may set access levels for each user or group that is added to the particular calendar. If a user is not listed in the calendar's Members list (either by being a member of a group or added), they will not be able to view this calendar. Once a user or group is added to a calendar's member list, they will have the levels of access.

View Only - Users may view any event in this calendar.

Normal - Users may add events to this calendar. If **strict event security** is NOT enabled (on the General calendar settings), any user set to this access level may edit any other user's events. If **strict event security** is enabled, only the user who created the event or a calendar administrator may edit it.

Admin - Users have full control over the calendar. They may add events, edit anyone's existing events (if event security is not enabled) and change calendar settings just as if they were the calendar's owner.

To assist in calendar administration, there are two pseudo groups in Thyme; Public and Registered Users.

General	Members	Categories	Remote Access	Event Request
Name	Description	Access Level	Add	
 Registered users	Registered users	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>	<input type="button" value="Remove"/>
 Public	Public	View Only <input type="button" value="v"/>	<input type="button" value="Update"/>	<input type="button" value="Remove"/>

Public - refers to all users, including those not logged in. Public access can be enabled or disabled globally.

section of Thyme's Admin panel. Adding the Public group to a calendar's member's list will allow you to access.

Registered Users - this group refers to any user who is logged in.

These groups do not require administration. You do not need to, nor can you, add or remove members from

Using groups greatly simplifies administration when dealing with a large amount of users. When a group is members list of a calendar, all members of that group are assigned the same access level you specified in Members configuration. This greatly aids in administration when you have a particular group of users you want membership to on multiple calendars.

For instance, let's assume you have a group called Tech Support Supervisors. You would like this group to administer all calendars dealing with technical support. Simply add the group Tech Support Supervisors to support calendars.

Tech Support Facility Maintenance

General	Members	Categories	Remote Access	Event Requests
Name	Description	Access Level		
 dbruce	David Bruce	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>	
 dcumming	Donald Cumming	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>	
 dcunningham	Duncan Cunningham	Normal <input type="button" value="v"/>	<input type="button" value="Update"/>	
 Tech Support Supervisors	Technical Support Supervisors	Admin <input type="button" value="v"/>	<input type="button" value="Update"/>	

Now you may simply manipulate the group Tech Support Supervisors to control access to these calendars

Members of Tech Support Supervisors

Users
Charles McInnes (cmcinnnes) Daniel Fraser (dfraser) Daniel Hume (dhume) Daniel McCalman (dmccalman) Dennis McMillan (dmcmillan) Robert Dalziel (rdalziel) William Johnson (wjohnson) William Logan (wlogan)
<input type="button" value="Add"/> <input type="button" value="Remove"/>
<input type="button" value="Save"/>
